

Siri Siddalingappa Naganoor

📞 934-221-8595 | ✉️ sirinaganoor@gmail.com | 🌐 siri-CodeforGood | in siri-s-n | 🏠 Sunnyvale, CA

Education

Stony Brook University

Master of Science in Electrical and Computer Engineering - 3.8/4.0 GPA

- Worked as a Teaching Assistant and Senior Research Aide.

Stony Brook, NY

08/2022-12/2023

Dayananda Sagar University

Bachelor of Technology in Electronics and Communication Engineering - 8.82/10

- Completed multiple internships, academic projects, and was a national hackathon finalist

Bangalore, India

08/2015 - 05/2019

Skills

Programming	Python, JavaScript, TypeScript, Java, C, C++, MATLAB
Web Development	Django, Next.js, ReactJS, ExpressJS, NodeJS, GraphQL, HTML, CSS, Tailwind CSS, Bootstrap, Bubble, Webflow
Databases	PostgreSQL, MongoDB, MySQL, Redis
Cloud	Microsoft Azure: Container Apps, Logic Apps, Function Apps, Data Factory, Data Lake, Key Vault, Bicep (IaC)
AI & LLM Tools	GitHub Copilot, Microsoft Copilot Studio, Model Context Protocol (MCP), Hugging Face, OpenAI API, Azure OpenAI
APIs	REST, Twilio, SendGrid, Stripe, Enode, Green Button Connect, TikTok Discovery API, Celery
Others	GitHub, Docker, Sentry, PostHog, Jira, Postman, ServiceNow, Splunk, Robo3T, Arduino, ESP8266, ESP32

Work Experience

Meltek Inc. (Ongoing since 1year 9months)

Remote, New York, USA

Software Developer

Jan 2024 - Present

- Built and launched **QuickPayConnect**, a system that reduced customer payout time **from 6 weeks to < 24 hours**, by integrating utility data systems and automating energy performance analysis.
- Engineered scalable **Django REST APIs** and **Celery** async task pipelines to automate dispatch, authorization, and energy data ingestion—**handling 10M+ records/month** using Azure, PostgreSQL and cloud-native services
- Delivered full-stack features in **Next.js** across Meltek and DiscoTok (TikTok SaaS)—including admin dashboards, onboarding flows, and i18n rollout across 5 locales—**improving user responsiveness by 80%**.
- Built deployment infrastructure for Azure Logic Apps and Function Apps, resolving critical scalability issues via backend optimizations like connection pooling and batch processing—ensuring smooth high-volume processing and **99.9%+ uptime**.
- Developed the company's core dispatch system using Enode, replacing manual processes with webhook-triggered alerts—resulting in an **80% increase in user responsiveness** and higher revenue.
- **Collaborated cross-functionally** to improve user workflows and platform adoption, while **mentoring new team members** through code reviews and architecture guidance.
- Implemented structured logging, access auditing, and error alerting systems aligned with **SOC2 compliance**, strengthening platform security and observability.

Software Developer Intern

May 2023 - Aug 2023(3 months)

- Developed and deployed **10+ API-driven workflows** using Bubble.io and Azure Logic Apps, dramatically improving data integration, user onboarding, and notification reliability—achieving **99% message deliverability**.
- Identified and resolved critical production issues—including looping payment retries and broken signup flows—**reducing related customer support load by more than 50%** and stabilizing core user operations.
- Contributed to the **early architecture of automated payout and dispatch systems**, to design scalable backend processes that now support **thousands of customers**.

Infosys Limited (3 years)

Bangalore, India

Senior Systems Engineer

Jan 2021 - Aug 2022

- Led the development of a centralized Partner Management Portal for Infosys Domain Consulting Group, supporting a 59% YoY revenue increase in their product business.
- Owned end-to-end architecture, PoC design, and implementation as the sole Full Stack Developer, delivering the solution using the MERN stack in an agile setting.

Systems Engineer

Oct 2019 - Dec 2020

- Developed backend services in Java for Phase 2 of Allstate Insurance's Transformative Growth Portal, enhancing core features to improve scalability and performance.
- Independently built the Vehicular Insurance Line of Business in Phase 1 within one year, earning high client satisfaction and trust.

Indian Institute of Science (IISc) (9 months)

Bangalore, India

Research Intern [Thesis: Detection of Brain Anomalies in Real-Time Using P300] [Supervisor: Dr. Hardik J Pandya,

BEES Lab]

Jan 2019 - Sept 2019

- Designed and developed a real-time EEG screening device to detect brain anomalies using P300 signals, implementing Oddball Paradigm stimuli and MATLAB-based signal processing, along with simulating hardware and building the foundational PCB for EEG acquisition.

Publications

The Memorable Assistant: An IoT-Based Smart Wearable Alzheimer's Assisting Device

- S. N. Siri, H. B. Divyashree and S. P. Mala, "The Memorable Assistant: An IoT-Based Smart Wearable Alzheimer's Assisting Device," 2021 IEEE International Conference on Computation System and Information Technology for Sustainable Solutions (CSITSS), Bangalore, India

Awards

2023	Hack@CEWIT 2023 - Winner, Received the "Most Helpful Hack" Award [Devpost]	Stony Brook, USA
2020,2021	Insta Award, Received Infosys Best Performance award for 3 quarters, given to one top performer per team.	Bangalore, India
2019	Smart India Hackathon Software Edition, Finalist in the top 1300 teams out of 37000+ teams	Bangalore, India
